Warning: Data set has only 3 Detected Values.							
This is not enough to compute meaningful or reliable statistics and estimates.							
Note: Sample size is small (e.g., <10), if data are collected using incremental sampling methodology (ISM) approach, refer also to ITRC Tech Reg Guide on ISM (ITRC 2020 and ITRC 2012) for additional guidance, but note that ITRC may recommend the t-UCL or the Chebyshev UCL for small sample sizes (n < 7).							
The Chebyshev UCL often results in gross overestimates of the mean.							
Refer to the ProUCL 5.2 Technical Guide for a discussion of the Chebyshev UCL.							
Normal GOF Test on Detects Only							
Shapiro Wilk Test Statistic			0.958	Shapiro Wilk GOF Test			
1% Shapiro Wilk Critical Value			0.753	Detected Data appear Normal at 1% Significance Level			
Lilliefors Test Statistic			0.26	Lilliefors GOF Test

Gamma ROS Statistics using Imputed Non-Detects									
GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs									
GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)									
For such situations, GROS method may yield incorrect values of UCLs and BTVs									
This is especially true when the sample size is small.									
For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Nonparametric Distribution Free UCL Statistics									
Detected Data appear Normal Distributed at 1% Significance Level									
Suggested UCL to Use									
95% KM (t) UCL			0.915						
Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.									
Recommendations are based upon data size, data distribution, and skewness using results from simulation studies.									
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.
