## **CASE NARRATIVE**

**Client: Groundwater Sciences Corporation**

**Project: Harley Davidson**

**Report Number: 180-48125-1**

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

### **RECEIPT**

The samples were received on 09/25/2015; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 4.0 C.

### **VOLATILES**

The following samples was diluted to bring the concentration of target analytes within the calibration range: HD-MW-81S-0/1-0 (180-48125-2), HD-MW-81D-0/1-0 (180-48125-3) and HD-MW-20S-0/1-0 (180-48125-5). Elevated reporting limits (RLs) are provided.

The following analyte was outside the %D criteria but within the method criteria of number of analytes allowed to recover outside limits: Chloroethane. A low level calibration verification standard was analyzed with acceptable recovery.

#### Tech Tips:

Vinyl acetate is a volatile organic ester included in the target lists of several US EPA and other methods. Under acidic conditions, esters react with alcohols to form new esters (transesterification). Methanol-based mixes containing halogenated compounds are slightly acidic, so it is important to minimize exposure of vinyl acetate to mixes of halogenated compounds in methanol. For this reason, we offer vinyl acetate in individual solution, and suggest that it be introduced into the working level calibration solution immediately before use. This will minimize problems and ensure more consistent results.
